Soil Erosion & Pollution Control Questioner

Address of Building Permit _____

Date _____

Applicants Name _____

Sediment from construction activities are a major source of pollution for the waters of the state. Although the construction project may not be directly next to a water source, pollutants and sediments containing pollutants can easily be transported to lakes, stream, and rivers from runoff into the storm water system located throughout the city. Sediment can contain toxic and biological pollutants that will effect aquatic plants and wildlife.

1. Is a soil erosion Permit or wavier required for your project ____ Yes ____ No
2. Are you aware that construction activities can pollute waters of the state ____ Yes ____ No
3. Are you aware of sediment control practices ____ Yes ____ No
4. Are you aware of the Household Hazardous Materials Recycling Program ____ Yes ____ No
5. Are you aware that street storm drains discharge to Lakes and Rivers ____ Yes ____ No
6. Are you aware of recommended Vehicle Washing Practices ____ Yes ____ No
7. Are you aware of that it is important to maintain clean street gutter in front of your property ____ Yes ____ No
8. Are you aware that composting natural materials can cause pollution of water ____ Yes ____ No
9. Are you aware that discharge of waste water to sump pumps pollute surface water ____ Yes ____ No
10. Are you aware that vehicle leaking fluids can pollute surface water ____ Yes ____ No
11. Are you aware that our source of drinking water comes from surface water ____ Yes ____ No

Please return this questioner to the City of Mt. Morris office. More information about pollution prevention can be found at the Michigan DEQ website http://www.michigan.gov/deq/0,4561,7-135-70153_70155---,00.html
